

Case Study | Mivtach Simon

The Business

Israel's largest pension management company, Mivtach Simon (MVS), specializes in pension plans, life insurance, and financial planning for businesses. MVS's investment solutions provide financial security to 160,000 individuals and 6,000 corporate customers nationwide.

"The Safe-T Secure Email is the most secure and flexible solution for mail and file transfer. Safe-T helps us comply with regulatory requirements, and integrates easily with our in-house systems".

Guy Ovadia,
MVS's Infrastructure
Division Manager

Mivtach Simon (MVS) secured the exchange of sensitive files and data with Safe-T's Secure File and Email Access solution

Safe-T provides a comprehensive solution for secure file transfer, process automation and compliance with regulatory requirements.

The Challenge

MVS, like all financial institutions, has the duty to protect its customer's sensitive data. This need, when combined with the increasingly strict regulations enforced by Sarbanes-Oxley (SOX) and banking and securities exchange supervisory bodies, requires banks to implement systems that prevent security breaches of all kinds. Such a system must provide email encryption, an encrypted infrastructure zone, and an inspection platform for identification of viruses and malware.

The Solution

In 2012, Mivtach Simon deployed Safe-T's Secure Email Access solution:

- With Secure Email Access, MVS created content-sharing policies and procedures, and integrated them intuitively into streamlined workflows. The platform enables collaboration with anti-virus and DLP products, business and IT systems, in-house developments, APIs, and other open source technologies. Safe-T enables the automation of interworking between systems – such as sending one-time passwords to the recipient's mobile phone, whose number is extracted from the company's CRM system.
- Safe-T's Microsoft Outlook plug-in provides enhanced mail security while enabling continued use of the familiar Outlook mail client. Safe-T offers configurable security methodologies for different types of files and content.

Benefits

Safe-T Secure Email works transparently. It secures the enterprise mailbox without disruption of business processes, while meeting regulatory requirements.

Files of any size can be sent. Size limitations imposed by the mail server are bypassed.

Files can be stored within the organization with no need to maintain duplicate materials on a DMZ.
