

## Case Study | Shomera

### The Business

Established in 1943, the Shomera Insurance Company is a rapidly expanding insurance firm that encompasses a network of more than 3000 users at the agents offices. In the course of establishing new policies or amending existing accounts, the field offices must often exchange electronic files containing highly sensitive and confidential customer information with the company headquarters.

As with all firms in the insurance industry, Shomera's business activities are subject to stringent regulations that govern the transfer of sensitive personal data. Government and industry requirements demand state-of-the-art security measures and advanced tracking and audit-trail capabilities.

### Shomera secured its file transfer with Safe-T Secure File Access solution

Safe-T provides a comprehensive solution for securing files and data, and for meeting the strictest regulatory requirements.

#### The Challenge

Due to regulatory requirements in the State of Israel, Shomera is required to follow strict regulations in the field of information security, including conveying sensitive data to all Shomera's agents.

#### The Solution

In 2012, Shomera deployed Safe-T's Secure File Access solution, which is based on Safe-T Box secure data exchange platform. Safe-T unique architecture enables IT departments to create simple, powerful application workflows that apply company policy to users and groups and strengthen content sharing guidelines. By managing the collaborative workflow vis-a-vis third-party applications, shared content is validated against the policy and procedures - within the workflow itself - as it enters and leaves the organization. The platform enables collaboration with anti-virus and DLP products, business and IT systems, in-house developments, APIs, and other open source technologies. After performing a simple installation procedure and selecting system-wide user options, the system was up and running throughout the entire organization within a few days. Safe-T Box's rapid deployment and ease of use ensured that there was no discernible negative impact on company efficiency or on the quality of inter-office communications.

#### Benefits

Safe-T Secure File Access works transparently. It secures the enterprise file transfer processes without disruption of business processes, while meeting regulatory requirements.

Files of any size can be shared. Size limitations imposed by the mail server are bypassed.

Files can be stored within the organization with no need to maintain duplicate materials on a DMZ.
