

## Safe-T Software Defined Access Office 365 Security Jacket

### The Need

The flourishing witnessed massive adoption of Microsoft Office 365 is giving enterprises access to leading productivity tools (e.g. Outlook 365, OneDrive for Business, Office suite, and more) that offer flexibility and cost reduction of cloud services. Thus freeing up IT and security teams to focus on improving and securing the network and on premise business applications.

However, the current move to Office 365 for corporate use, and data previously stored on premise, move to the Cloud has created challenges around compliance, regulations, data security, data leakage, etc.

The simplicity and lack of built-in auditing and tracking, create the opportunity for users to utilize cloud based solutions and storages, for their own use in addition to business use. Imagine a business user, using the corporate OneDrive account to share un-sanctioned company related information with a customer or business partner or store personal data.

### The Solution

#### Safe-T Office 365 Security Jacket

- Safe-T smooth integrative deployment enables organizations utilizing Office 365 to control and secure data exchange of any type and size between people, applications, cloud solutions, and businesses.
- Safe-T enables organizations to quickly and easily add security layers to Office 365 business processes.
- Safe-T offers unmatched integration into cloud based applications through the use of its pre-built Connectors, allowing organizations to connect to Office 365 OneDrive, SharePoint Online, Outlook 365, etc.

### Benefits

- ✓ Add security and encryption layers to Office 365 productivity tools
- ✓ Ensure un-sanctioned file types/sizes are not stored or sent in/with Office 365 productivity tools
- ✓ Ensure users do not bypass Outlook 365 when exchanging large files with recipients
- ✓ Support all email exchange flows using Outlook and Exchange 365, including Flexible authentication options
- ✓ Automatically secure any data leaving the organization to Office 365
- ✓ Scan any downloaded and incoming data for viruses
- ✓ Integrate common and proprietary business applications with Office 365 suite
- ✓ End-to-end security between sender and recipient
- ✓ Comply to regulations with full data exchange flow monitoring
- ✓ Provide users control of their outgoing emails' security and encryption levels
- ✓ Strengthening the control of and reducing the costs of sensitive data sharing
