

Symantec Technology Partner: Safe-T Data

Partner Product: Software Defined Access

Symantec Products: Data Loss Prevention,
Endpoint Protection

Business Challenge

Your data, the lifeblood of your organization, is continuously at risk of getting stolen or compromised. Attackers exploit vulnerabilities found in the many ways your organization accesses files, the many places files are stored, and the many applications you use to engage with your remote employees, customers, and business partners.

If your confidential data falls into the wrong hands, the consequences could include failure to meet regulatory standards (such as HIPAA, GDPR, and PCI DSS), legal action, fines, theft of intellectual property, bad publicity, and loss of strategic customers.

How do you control, manage, and secure the large amounts of data your organization exchanges and stores?

Combined Benefits

- Comply with policies and regulations (GDPR, HIPAA, PCI DSS, and more)
- Reduce operational and capital costs through security solution consolidation
- Hide files from unauthorized users
- Prevent file exfiltration, leakage, malware, and ransomware

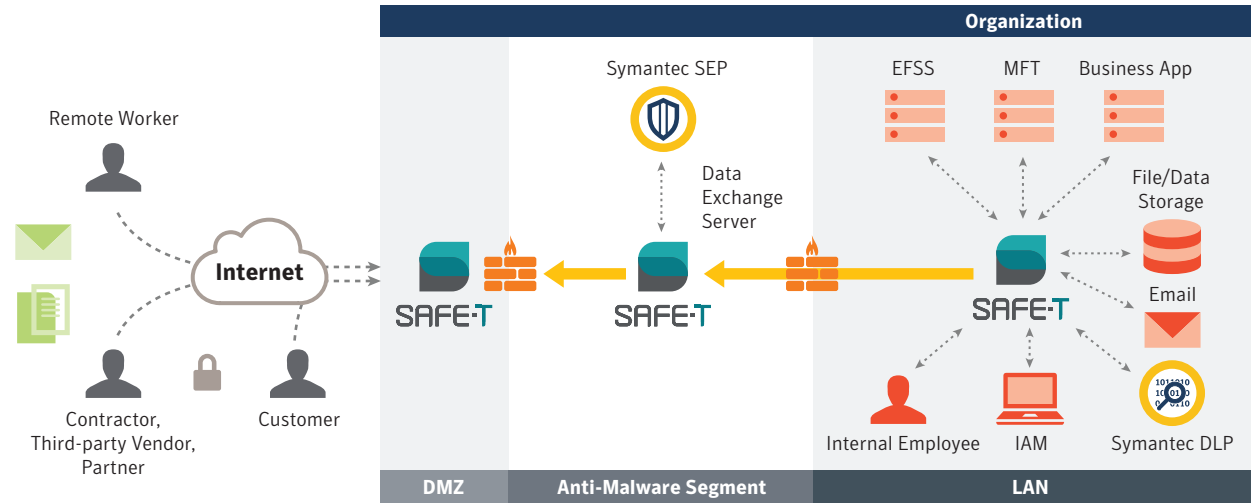

- Enable clientless file access
- Control file usage
- Consolidate all human and application file access scenarios in one platform
- Monitor file access flow from end to end

Integrated Solution

Safe-T® Software Defined Access (Safe-T SDA) is designed from the ground up to protect your files from internal or external unauthorized access and data usage, thus preventing attackers from leaking, stealing, misusing, encrypting, or compromising your files. Prior to granting access to data, Safe-T SDA authenticates the user offsite, preventing unauthorized users from ever reaching your data. Once authenticated, users are connected to the data repository where their actions are further controlled.

Safe-T SDA enables organizations to control access to, and secure the use and exchange of, any type and size of files as they move between people, applications, cloud solutions, and businesses. It brings security and control to a wide variety of workflows, including to and from the cloud. Organizations use the wide range of Safe-T SDA connectors to third-party solutions to easily include their own existing security solutions in all data access and usage flows.

Integrating Safe-T SDA with Symantec Data Loss Prevention (Symantec DLP) and Symantec Endpoint Protection (SEP) enables you to centrally control all incoming and outgoing data flows. Scan and control all files, regardless of their source or destination, before they leave or enter your network.

The joint Safe-T SDA, Symantec DLP, and SEP solution centrally controls all incoming and outgoing data flows, protecting files from internal or external unauthorized access and data usage. The result: Attackers cannot leak, steal, misuse, encrypt, or compromise your organization's files.

About Safe-T Data

Safe-T Data (NASDAQ, TASE: SFET) is a leading provider of software-defined access solutions which mitigate attacks on enterprises' business-critical services and

sensitive data. Safe-T solves the data access challenge by masking data at the perimeter, keeping information assets safe and limiting access only to authorized and intended entities in hybrid cloud environments. Safe-T enhances operational productivity, efficiency, security, and compliance by protecting organizations from data exfiltration, leakage, malware, ransomware, and fraud. With Safe-T's patented, multi-layer software-defined access, financial services, healthcare, utility companies and governments can secure their data, services, and networks from internal and external data threats.

About Symantec

Symantec Corporation (NASDAQ: SYMC), the world's leading cyber security company, helps organizations, governments and people secure their most important data wherever it lives. Organizations across the world look to Symantec for strategic, integrated solutions to defend against sophisticated attacks across endpoints, cloud and infrastructure. Likewise, a global community of more than 50 million people and families rely on Symantec's Norton and LifeLock product suites to protect their digital lives at home and across their devices. Symantec operates one of the world's largest civilian cyber intelligence networks, allowing it to see and protect against the most advanced threats.
